INTRODUCTION TO CONSERVATION & RESTORATION OF ROMAN POTTERY AND GLASS: STOBI, NORTH MACEDONIA
Course ID: ARCH 365BD
June 3–June 23, 2023

FIELD SCHOOL DIRECTORS
Ms. Bilyana Jankulovska, Senior Conservator, National Institution Stobi, Republic of N. Macedonia

PROJECT COORDINATORS
Dr. Angela Pencheva, Project coordinator (Stobi), Balkan Heritage Foundation Director
(angelapbh@gmail.com)

INSTRUCTORS
Dr. Eva Todorova – Drawing technician, National Archaeological Institute with Museum, Bulgarian Academy of Sciences (Stobi)

This program is a short introduction to archaeology field conservation. It is designed to present students with the fundamentals of conservation and restoration work and a taste for the rigors of field work.
OVERVIEW

This course is focused on the conservation and restoration of Roman and Late Roman pottery and gives basic introduction to treatment, conservation and restoration of glass objects.

It consists of three weeks and will take place at the site of Stobi, Republic of N. Macedonia. Stobi was an important Roman city and reached its zenith of power during the 1st – 3rd centuries CE.

The main goal for this program is to provide theoretical and hands-on training experience on pottery and glass conservation. It does so through the exposure of students to the conservation techniques and specifics of two different materials, enabling them to evaluate and appreciate similarities and differences in conservation problems, approaches, methods, technique, design and material choice applied on different types of artifacts.

The pottery and the glass vessels for the workshop in the Republic of N. Macedonia come from the excavations of the Roman and Early Byzantine city of Stobi and are provided by the National Institution Stobi (NI Stobi). These are mainly locally produced Roman and Late Roman ceramic shapes.

Students begin their training with replicas of ancient vessels and then progress to originals once they reach an acceptable level of skill, accuracy and precision. Most students will be able to master conservation and restoration efforts within the course of this field school and expect to complete work on 2-5 artifacts by the end of the program, depending on the initial state of objects’ conservation, the necessity of conservation treatment and the individual performance of the student.

Upon successful completion of the course, they will be prepared to take part in projects for conservation, restoration and documentation of archaeological pottery, under the supervision of professional conservators and restorers.

ACADEMIC CREDIT UNITS & TRANSCRIPTS

Credit Units: Attending students will be awarded 4 semester credit units (equivalent to 6 quarter credit units) through our academic partner, Connecticut College. Connecticut College is a highly ranked liberal arts institution with a deep commitment to undergraduate education. Students will receive a letter grade for attending this field school (see assessment, below). This field school provides a minimum of 180 hours of experiential education. Students are encouraged to discuss the transferability of credit units with faculty and registrars at their home institution prior to attending this field school.

Transcripts: An official copy of transcripts will be mailed to the permanent address listed by students on their online application. One more transcript may be sent to the student’s home institution at no cost. Additional transcripts may be ordered at any time through the National Student Clearinghouse: http://bit.ly/2hvurkl.

PREREQUISITES

None. This is hands-on, experiential learning and students will work in the lab and learn how to conduct conservation, restoration and documentation work. These activities involve patience, careful work and concentration, and thus require a measure of acceptance that is not found in the typical university learning environment. Students are required to come equipped with sufficient excitement and the understanding that conservation and restoration endeavor requires hard work, patience, discipline, close concentration and attention to detail.
The Conservation & Restoration Field School will host students and professionals from all over the world. With such an international team, it is vital that all students respect the IFR code of conduct, each other’s cultures, and local organizational, social and cultural rules and laws.

### DISCLAIMER – PLEASE READ CAREFULLY

Our primary concern is with education. Traveling and conducting field research involve risk. Students interested in participating in IFR programs must weigh whether the potential risk is worth the value of education provided. While risk is inherent in everything we do, we do not take risk lightly. The IFR engages in intensive review of each field school location and programming prior to approval. Once a program is accepted, the IFR reviews each program annually to make sure it still complies with all our standards and policies, including those pertaining to student safety.

The IFR does not provide trip or travel cancellation insurance. We encourage students to explore such insurance on their own as it may be purchased at affordable prices. [Insuremytrip.com](https://www.insuremytrip.com) or [Travelguard.com](https://www.travelguard.com) are possible sites where field school participants may explore travel cancellation insurance quotes and policies. If you do purchase such insurance, make sure the policy covers the cost of both airfare and tuition.

We do our best to follow a schedule of activities, methods, training, and programming as outlined in this syllabus. However, this schedule can be easily disrupted by any number of unforeseen circumstances, including revised decisions by local permitting agencies, political unrest, and changes in the weather. While this schedule represents the best of the director(s) intentions, we—students and staff alike—need to be adaptable and tolerant of necessary alterations. This adaptability is an intrinsic part of all field research.

You should be aware that conditions on the Balkans are different from those you experience in your home, dorms or college town. Note that South European (subtropical) climate dominates in the region, making summers hot (30-40°C). Rainy and chilly days in this season are rare but not unheard of.

If you have any medical concerns, please consult your doctor. For all other concerns, please consult with the project director – as appropriate.

### COURSE OBJECTIVES

The objective of this program is to prepare students to take part in archaeological ceramics conservation and restoration activities. The activities in this program will include the following:

1. Introduction to fundamental ethical principles of conservation and restoration. These include among others the principles of reversibility, compatibility, re-treatability and authenticity, and the principle of minimal intervention. Detailed documentation process and basic requirements for conservation materials are also discussed.

2. Introduction to the aesthetic principles of conservation: partial or complete restoration of the original appearance of the object without eliminating the impact of time on it, preserving the artistic values of the artifact, hiding or pointing out restored parts.

3. Presentation of the main causes for deterioration, especially upon excavation.
4. Introduction to preliminary pottery and glass analyses and condition assessment of the finds: observations under low and high magnification, sampling and samples, instrumental analyses. Results as a base for informed conservation treatment proposals.
5. Training through practical exercises: basic conservation and restoration activities: damage assessment and classification, conservation plan, mechanical and chemical cleaning, desalination and consolidation of pottery shards, reassembling fragmented objects, in-filling, retouching, and detailed documentation.
6. Introduction to conservation documentation, including its visual, historical, and technical aspects as well as conservation treatment performed on the object.
7. Introduction to the post conservation monitoring process.
8. Introduction to technological characteristics and technology of ancient pottery and glass and their changes through time.
9. To prepare students to create, organize and maintain artifacts and conservation databases.
10. Collection and keeping both data and metadata about objects and their documentation safe.
11. Introduction to the archaeological and historical contexts of the restored materials – sites, cultures, research problems, etc.
12. Introduction to health and safety requirements in a conservation lab.

**LEARNING OUTCOMES**

Students participating in this field school will develop basic/further practical skills (depending on the participant’s initial level of qualification) in ancient pottery and glass conservation and documentation, leaving them better prepared for future conservation projects. They will have certain knowledge of the history and archaeology of Stobi and ancient Macedonia during the Roman and Late Roman periods, as well as the forms, types and technology of Roman and Late Roman pottery and glassware. During the outlined activities participants will learn skills transferable outside of excavations, such as analytical thinking, teamwork, the ability to meet deadlines and adapt to outside conditions, which will aid them when seeking employment in any work field.

**ASSESSMENT**

Students will be graded based on their work as follows.

<table>
<thead>
<tr>
<th>% Of Grade</th>
<th>Activity</th>
</tr>
</thead>
<tbody>
<tr>
<td>20%</td>
<td>Roman and Late Roman Pottery Conservation</td>
</tr>
<tr>
<td>20%</td>
<td>Conservation of ancient Glass</td>
</tr>
<tr>
<td>15%</td>
<td>Attendance</td>
</tr>
<tr>
<td>15%</td>
<td>Technical drawing of pottery &amp; digitizing of the graphic documentation</td>
</tr>
<tr>
<td>10%</td>
<td>Final Presentation</td>
</tr>
<tr>
<td>20%</td>
<td>Final Exam</td>
</tr>
</tbody>
</table>

**ATTENDANCE POLICY**

The required minimum attendance for the successful completion of the field school is 85% of the course hours. Any significant delay or early departure from an activity will be calculated as an absence from the activity. An acceptable number of absences for a medical or other personal reason will not be taken into account if the student catches up on the field school study plan through additional readings, homework or tutorials with program staff members.
TRAVEL, ROOM & BOARD, & SAFETY LOGISTICS

COVID-19 Disclaimer:
The logistics outlined below for this IFR field school were written according to the most current and accurate information available to IFR. We recognize that the best practices for preventing the transmission of the coronavirus may change in the coming months. The IFR will be revisiting program-specific plans periodically throughout the enrollment period and will update program details according to new developments, new travel protocols, and updates to local policies. Updates to program-specific protocols will be communicated to participants at the pre-program orientation.

An IFR field school is designed to provide safe, positive, and constructive experiences for participating communities, students, and researchers. We are committed to protocols and practices that support the health and well-being of all involved in our field school projects, including the members of the community in which these projects take place. The IFR COVID-19 Policies have been developed with Dr. Kurt Eifling, the IFR Medical Director. Dr Eifling is a Fellow of the Academy of Wilderness Medicine and a practicing physician (https://ifrglobal.org/about/staff/).

We strongly recommend reviewing IFR’s COVID-19 policies before enrolling in a program. All IFR students sign an agreement (Student COVID-19 Prevention Agreement) to uphold and abide by all aspects of the IFR COVID-19 policy as published on the website (https://ifrglobal.org/ifr-covid-19-practices/) as well as any program-specific protocols. These practices are subject to change as health and risk management experts provide new recommendations and best practices.

PRIOR TO TRAVEL
IFR requires all students participating in IFR programs to be “up to date” with their COVID-19 vaccines, meaning they have completed a COVID-19 vaccine primary series AND received the most recent booster dose recommended by CDC, if eligible. For recommendations and eligibility for booster shots according to age and health status, please consult the CDC website.

On arrival at Skopje International Airport, students will need to take a PCR test at the airport labs and then self-quarantine at a recommended airport hotel overnight. Students are responsible for these costs—the PCR test and the hotel room— and should make a room reservation prior to travel. Please see below for more information.

VISA REQUIREMENTS
Citizens of EU, EEA, USA, Canada, Japan, Republic of Korea, Australia and New Zealand do not need a visa to visit R. of N. Macedonia for up to 90 days. Citizens of all other countries may need a visa. The Balkan Heritage Foundation can send an official invitation letter that should be used at the relevant embassy to secure a visa to the program.

For more information about border crossing visit the Balkan Heritage Field School web site at http://www.bhfieldschool.org/countries/macedonia and http://www.bhfieldschool.org/countries/bulgaria and http://www.bhfieldschool.org/information/visa-help and the links provided there.
Citizens of other countries are asked to check the embassy website page at their home country for specific visa requirements.

**TRAVEL (TO AND DURING THE PROGRAM)**

Due to ongoing uncertainties regarding the travel regulations related to COVID-19, IFR will assess the local conditions closer to the travel date (5–6 weeks prior to the program beginning) and will make Go/No Go decisions then. You are required to participate in the mandatory orientation meeting when we will discuss the latest travel information and regulations. We also suggest you consider postponing the purchase of your airline ticket until after the program orientation.

Please frequently consult the website of the US Embassy in North Macedonia for the most up-to-date travel restrictions/protocols [https://mk.usembassy.gov/covid-19-information](https://mk.usembassy.gov/covid-19-information)

If a student is held at the border for health reasons, they should contact the program director or appointed staff member for their field school at the numbers provided in their orientation materials.

There are two options for arrival:

1. On arrival at Skopje Airport in North Macedonia, conduct a COVID-19 PCR test on arrival at the airport and get self-quarantined for the period before the pickup, at the Hotel Square**. (These rules may be changed. The BHFS will provide ongoing updates on COVID-19 rules and restrictions in N. Macedonia to all enrolled students). Students are responsible for these costs—the PCR test and the hotel room—and should make a room reservation prior to travel. All students with negative PCR test results will be picked up from the hotel by a shuttle and delivered to the recently renovated air-conditioned cabins at the archaeological site of Stobi. The distance is approx. 80 km, and the ride will take approx. 1 hour. The project cost covers the shuttle price.

2. On arrival at Thessaloniki Airport in Greece, arrange in advance a pickup with BHF logistic coordinator to the town of Kavadarci (approx. 160 km from Thessaloniki) in North Macedonia conduct a COVID-19 PCR* test [https://genea.mk/-](https://genea.mk/-) app. 27 USD) on arrival at the airport and get self-quarantined for the period before the pickup, at the Hotel Feni** (these rules may be changed. The BHFS will provide ongoing updates on COVID-19 rules and restrictions in N. Macedonia to all enrolled students). Students are responsible for these costs—the PCR test and the hotel room—and should make a room reservation prior to travel. All students with negative PCR test results will be picked up from the hotel by a shuttle and delivered to the recently renovated air-conditioned cabins at the archaeological base. The distance from Kavadarci to Stobi is 19 km and the ride will take approx. 20 min. The project cost covers the shuttle price.

3. If you missed your connection or your flight is delayed, please call, text or email the field school director / project staff immediately (email: bhfs.admissions@gmail.com). A local emergency mobile phone number will be provided to all enrolled students.

**LOCAL PROTOCOLS, REGULATIONS, & EXPECTATIONS**

For current entry requirements for the R. of N. Macedonia, please check: [US Embassy in N. Macedonia](https://mk.usembassy.gov/covid-19-information)

These requirements may change in the following months according to the COVID-19 situation in the country.
The program will not include activities that promote extra-contact with people outside of the team and project venue. Interaction with the local community must be limited to situations where everyone can maintain the required 6-foot/2-meter physical distance, wear masks, and ideally be outside.

In case of a COVID-19 outbreak, the affected students/staff members will be quarantined in hotel “Pamela” [https://www.hotelpamela.mk/] in the nearby city of Negotino (16 km from Stobi). The admission cost does not cover this potential expense.

Interaction with the local community must be limited to situations where everyone is masked when indoors and/or can ideally be outside.

**HEALTH AND SAFETY**

Safety and health orientation will take place at the beginning of the program. Cities around Stobi offer good medical facilities, first aid, and pharmacies. Proper personal hygiene and resting after a hard day of field work are good prevention methods against the summer flu.

**ACCOMMODATIONS**

Participants stay at the recently renovated, air-conditioned cabins at the archaeological base camp next to the ancient site of Stobi. Students will be housed in rooms with 2–3 beds each. Each cabin has 4 bedrooms, a living room, and 2 bathrooms with showers. A washing machine and Wi-Fi are available for free. The Stobi cleaning staff will clean and disinfect the rooms & bathrooms and common spaces every day. In the beginning of the field school students will be introduced to the safety protocol for the hotel, the shuttle and the site upon arrival.

The closest village to Stobi is Gradsko (5 km), where there are grocery stores, a pharmacy, an ATM, and medical facilities. The closest big supermarket, drugstores, pharmacies, banks with ATM and hospitals are in the city of Negotino (13 km from Stobi).

**Meals:** Three meals (fresh, homemade food) per day are covered by the reimbursement fee. Meals usually take place at the field house premises, except for lunch packages during excursions. This field school can accommodate vegetarians, vegans and individuals with lactose-intolerance diets. Kosher and gluten-free diets are impossible to accommodate at this location.

All participants in a field school, students and staff, will wear masks while indoors (i.e., during lectures, during labs, in shared residential spaces, etc.).

Regular hand washing will be a part of the project’s daily schedule.

**MANAGING COVID-19 CASES & OUTBREAKS**

In case of COVID-19 case with mild symptoms the student will be quarantined for 10 days (together with his/hers roommate/s, if any) at hotel “Pamela”[https://www.hotelpamela.mk/] in the nearby town of Negotino. He/she will receive food in the room. Their laundry will be processed separately. The admission cost does not cover this potential expense. The closest intensive care unit is located in the town of Negotino (13 min from Stobi).
**COURSE SCHEDULE**

Both workshops’ schedules consist of four modules:

**MODULE I - Theoretical module (25 hours for both workshops).** Covers the following topics:

1. Roman and Late Roman pottery and glass history and technology. This will include production technology, physical and chemical properties, shape & design.
2. Conservation documentation. Lectures focusing on visual documentation, including regular photography, software manipulation (Corel Draw) and data & metadata documentation of visual record, technical photography.
3. Analytical methods used to determine the chemical composition and the physical properties of artifacts, the damaging processes influencing the artifacts’ condition upon excavation.
5. Lectures focusing on the historical and archaeological context of the treated materials.

**MODULE II – Practicum (approx. 75 hours for both workshops).** Consists of four components:

1. Workshops dedicated to materials and production, which include the full production of replica vessels and explore the challenges related to production technology as practiced in the past.
2. Workshops dedicated to pottery and glass photographic and graphic technical documentation.
3. Workshops dedicated to ceramics and glass conservation.

**MODULE III - Excursions accompanied by lectures, presentations and study visits to sites of historical/archaeological significance such as the town of Bitola (Archaeological Museum) and the Heraclea Lyncestis excavation site, the town of Ohrid (Ancient Lychnidos, UNESCO World Heritage Site) in Republic of N. Macedonia, Pella and Vergina (UNESCO World Heritage Sites) in Greece.**

**MODULE IV – Homework (est. 10 hours for both projects)** will be assigned to all students, which will consist of editing and processing students’ conservation documentation (journal, conservation forms, drawings, photos, etc.) and preparing presentations and reports.

All IFR field school begins with safety orientation. This orientation includes proper behavior at the field area, proper clothing, local cultural sensitivities and sensibilities, potential fauna and flora hazards, review IFR harassment and discrimination policies and review of the student Code of Conduct.

</tr>
</tbody>
</table>
| Day 3 | **Lecture**: Material Science and Technology. Clay properties and changes during firing.  
**Lecture & Workshop**: typology and chronology of Roman and Late Roman pottery with examples from Stobi. Sorting and selecting different types of Roman and Late Roman pottery shards | **Lecture**: Deterioration of ceramics objects. *Soluble salts, porosity, firing; choosing the most appropriate conservation treatment for each object*  
**Workshop**: Cleaning and sorting of Roman and Late Roman pottery shards |
| Day 4 | **Lecture**: Conservation and restoration of Roman and Late Roman Objects. Basic steps and principles. Ethics and conservation  
**Lecture**: Required documentation for pottery and glass conservation.  
- Graphic documentation  
- Graphic reconstruction  
- Photographing  
- Conservation journal  
- Conservation history list  
- List of used materials and safety data sheets | **Study Excursion & Workshop**: Visit to a local traditional pottery workshop in the town of Veles. *Experimenting with pottery making* |
| Day 5 | **Lecture & Workshop**: Introduction to technical photography | **Workshop**: Conservation and restoration of Roman and Late Roman Objects.  
Preliminary assembly of fragmented objects – methods of temporary fixing of the loose parts. Final assembly – fitting the fragments together, application of adhesive and cleaning of the excess adhesive around the joints. Methods of temporary mechanical stabilization during adhesive setting. |

</table>
| Day 13 | Workshop: Conservation and restoration of Roman and Late Roman Objects.  
Final conservation treatment of original objects. Continued (the exact activities depend on the number of assigned objects and the complexity of each object, as well as on the individual progress of each participant. All activities are closely supervised by and discussed with professional conservator) | Workshop: Accomplishing the conservation documentation for the conserved vessels. |
| Day 14 | Preparation of PowerPoint presentation of the workshop’s results. | Presentation of the Workshop results. Discussion with the instructors. Evaluation meeting and conclusion. |
| Day 15 | Day off |  |
| Day 16 | Guided visit of Pella and Vergina (UNESCO World Heritage Site), Greece |  |
| Day 17 | Lecture. History of Pre-Roman and Roman glass technology. Chemical composition of glass. Forms of natural silica, forms of natural glasses, core formed glass vessels, mosaic glass; mold formed vessels, glass blowing, free blown vessels, mold blown objects, cage cups etc. | Lecture. Basic techniques in ancient glass conservation and restoration.  
Deterioration of glass, chemical deterioration, superficial disfigurement, physical damage, cleaning of glass, preliminary assembly, final assembly using medical tape, application of omega clips, application of resin, removal of the omega clips, cleaning of extra resin and adhesive, mold making (using dental silicon and rubber) application of the gap filling resin, refining the additions.  
Lecture. Materials used for cleaning, stabilization and conservation of ancient glass. Choosing consolidants and adhesives for archaeological glass; different resin types, solubility, ageing properties, reversibility, working properties. |
| Day 18 | Workshop: Conservation and restoration of Roman and Late Roman Glass Objects.  
Mechanical and chemical cleaning of selected original glass shards. | Workshop: Conservation and restoration of Roman and Late Roman Glass Objects.  
Initial documentation of the condition of glass replicas fragments. Assembly of fragments of Roman or Late Roman object with medical tape |
| Day 19 | Workshop: Conservation and restoration of Roman and Late Roman Glass Objects.  
Final assembly, application of omega clips. | Preparation of PowerPoint presentation of the workshop’s results.  
Presentation of the Workshop Results and Evaluations |
| Day 20 | Departure | Farewell dinner and party |

The course structure may be subject to change at the director’s discretion.

**EQUIPMENT LIST**

- Work clothes
- A set of walking and hiking shoes.
- Clothing suitable for outdoor activities (consider weather conditions from hot and sunny to rainy and chilly).
- Wide brim hat for the study trips.
- Medication - It is not necessary to bring over-the-counter medicine from your country since you can buy all common types in the R. of N. Macedonia e.g., aspirin, anti-insecticides, sunscreen, etc.) It is recommended that you bring your individual prescription medicines, if any.
- Don’t forget to bring a converter to an EU type electricity wall-plug if needed.
- It is recommended that participants bring PCs having at least 5 GB free disk space and a mouse. Operating system recommended: Windows.
- A good attitude for work, fun, study and discoveries.

**PRACTICAL INFORMATION**

Macedonian dialing code: +389

**Time Difference in the R. of N. Macedonia** (Summertime): UTC/GMT +1 hours (April through September)

**Measure units:** degree Celsius (ºC), meter (m.), gram (gr.), liter (l)

**Money/Banks/Credit Cards:**

The N. Macedonian currency is the Macedonian DENAR (MKD). N. Macedonian banks accept all credit cards and travelers’ checks. Usually, banks are open from 8.00 a.m. to 6 p.m. from Monday to Friday and from 8.00 a.m. to noon on Saturday. You can see N.Macedonian notes and coins in circulation at: [www.nbrm.mk/?ItemID=C2B15406ABC3BC46B2525F66092FB01D](http://www.nbrm.mk/?ItemID=C2B15406ABC3BC46B2525F66092FB01D)

In both countries, you cannot pay in Euros or other foreign currency except in casinos and big hotels (where the exchange rate is really unfair)!

The exchange of foreign currencies is practiced not only by banks but also by numerous exchange offices. **NB!** Most of them don’t collect commission fees and have acceptable exchange rates (+/- 0.5-1,5% of the official rate). However, those located in shopping areas of big cities, resorts, railway stations, airports etc. can overcharge you variable amounts. Ask in advance how much money you will get!

ATMs are available all over both countries, and POS-terminals are in most bank offices.

If you plan to use your credit/debit card, please inform your bank of your intention before departure! Otherwise, it is very possible that your bank will block your account/ card for security reasons when you try to use it abroad! Unblocking your card when abroad may cost you lots of phone calls and money.
ELECTRICITY

The electricity power in both countries is stable at 220 - Volts A.C. (50 Hertz). Don’t forget to bring a voltage converter if necessary!

Outlets generally accept 1 type of plug: Two round pins. If your appliances plug has a different shape, you may need a plug adapter.

Emergency in R. of N. Macedonia

National emergency number is **112**
Police: **192**
Fire brigade: **193**
Ambulance: **194**
Road assistance: **196**

REQUIRED READINGS

*PDF files of all mandatory readings will be provided to enrolled students via a shared Dropbox folder.*
